

CANH PHAM

Algorithmic Trading & Bot Developer

Ho Chi Minh City, Vietnam · Remote-friendly · Available immediately
[linkedin.com/in/canh-pham-bot-dev](https://www.linkedin.com/in/canh-pham-bot-dev) · github.com/crytobot459/eurorwa

SUMMARY

Algorithmic trading developer with **3+ years** building and operating automated Long/Short trading systems for crypto/futures — from strategy design, indicator engineering and LightGBM models to backtesting, Hyperopt optimization and live 24/7 deployment with strict risk management. Also built **EuroRWA**, a production on-chain RWA data platform: an AI-agent pipeline that snapshots tokenized money-market funds, signs every snapshot on-chain, and ships dashboards + Telegram bots.

CORE SKILLS

Freqtrade TA-Lib Backtesting Hyperopt LightGBM Scikit-learn Pandas NumPy Python TypeScript Bun
Node.js React SQLite Viem Solidity (Sepolia) REST/GraphQL APIs Web scraping Git / GitHub Actions Docker
Telegram Bot API

EXPERIENCE

Algorithmic Trading Developer

· Self-employed

2023 – Present

- Designed and operated **live automated Long/Short trading systems** for cryptocurrency and futures running 24/7, using probability-based entry/exit logic.
- Built **dual-model architectures with LightGBM** — a binary classification model on technical features whose probability thresholds control trade entry, integrated into the Freqtrade workflow.
- Engineered technical indicators: RSI, MACD, Bollinger Bands, ATR and TA-Lib candlestick patterns as model and strategy features.
- Conducted rigorous **backtesting and Hyperopt optimization** and enforced strict risk management (e.g. trailing stop-loss).

Bot Developer — RWA Data & On-chain Verification

· Self-employed (EuroRWA)

2025 – Present

- Built **EuroRWA** (open-source): a dashboard tracking **15 EU/US tokenized money-market funds** (USYC, BUIDL, USDY, eurSAFO...) — TVL, APY, holders and 7/30/90-day flows.
- AI-agent pipeline snapshots data every 12h, computes indicators, runs a BUY/HOLD/SELL analyst, and **hashes + signs every snapshot on-chain (Sepolia)** so anyone can verify the numbers.
- Deployed Telegram bots: a public data bot (webhook) and a freelance build bot (long-polling with Binance payment verification).
- Tech: TypeScript, Bun, React, Viem, SQLite, Hono, Google Gemini, Docker.

PROJECT

EuroRWA

· github.com/crytobot459/eurorwa · rwa-dashboard-gamma.vercel.app

- Live, on-chain-verified tokenized money-market fund dashboard — every snapshot is hashed and signed on-chain, no "trust me" dashboards.

LANGUAGES

- Vietnamese** — native
- English** — professional proficiency; used daily for documentation, coding, chat and reporting. I prefer written/asynchronous communication (messaging or email) and am happy to join calls when needed, following up in writing.

AVAILABILITY & WORK AUTHORIZATION

- Available immediately**, remote-first.
- Vietnamese citizen — **no visa sponsorship required** for remote work.
- Compensation: open to discussion.
